

ABSTRACT

The invention relates to particles containing at least
5 one active principle, which is preferably water-
soluble, containing one or more aromatic, carbocyclic
or heterocyclic, monocyclic or fused polycyclic groups,
with a molecular weight of less than or equal to 1000,
and at least one synthetic polymer containing aryl
10 groups with a glass transition temperature (T_g) of
greater than or equal to 45, to processes for preparing
such particles and to compositions containing them.
